

Create an excel file with given example data.And Try to upload it to postgres database through php.

excel sheet data example-:

Sl(integer)	name(varchar)	roll no	class(varchar)	marks(integer)
1	John Doe	01	one	5
2	John Doe	02	one	4.23
3	John Doe	03	one	3
4	John Doe	04	one	-10

Marks can be negative and If the column of marks has negative value then make it "0" then upload to database;

And If the column of marks has decimal value then store upto one decimal value in the database.
